

Advancing Infectious Disease Research: From Host-Pathogen Interactions to Innovative Therapeutic Strategies

July 31, 2026

14:00–16:10 CST (Beijing)

15:00 KST (Seoul)

15:00 JST (Japan)

11:30 IST (New Delhi)

16:00 AEST (Canberra)

Xin Jiang

University of Electronic Science
and Technology of China

Professor

**Mechanistic investigation and drug
discovery targeting Plasmodium
falciparum transporters**

Nam-Hyuk Cho

Seoul National University College of
Medicine

Professor

**IL-27-mediated hematopoietic
dysregulation exacerbates disease severity
in Severe Fever with Thrombocytopenia
Syndrome Virus infection**

Tetsuro Suzuki

Hamamatsu University School of
Medicine

Professor

**Frontiers in Antiviral Research:
Bridging Mechanistic Insights and
Therapeutic Innovation**

Haolan Zheng

ACROBiosystems

Senior Product Manager

**From Challenges to Solutions Method
Development for Vaccine Efficacy
Evaluation**

Infectious diseases have remained one of the most significant threats to global health for decades. The COVID-19 pandemic starkly demonstrated the devastating impact of emerging infectious diseases, with more than 82 million confirmed cases and over 1.8 million deaths reported worldwide by the end of 2020 alone. These challenges underscore the urgent need to better understand the biological mechanisms that govern infection, immunity, and disease progression, while accelerating the development of effective therapeutic strategies.

This webinar brings together internationally recognized researchers from China, Japan, and South Korea whose expertise spans infection biology, virology, immunology, and translational medicine. Through complementary perspectives, the speakers will discuss recent advances in host-pathogen interactions, immune regulation, disease pathogenesis, and therapeutic discovery.

By bridging fundamental research and clinical translation, this webinar aims to highlight emerging opportunities for combating infectious diseases and improving global health outcomes. The event will provide a valuable platform for researchers, clinicians, and students interested in the latest developments in infection and immunity research and the future of innovative therapeutic interventions.
